

RFP: Social Media Analytics Tool

Project Overview:

We are seeking to build a social media analytics tool that can track social media metrics such as follower count, post engagement, and reach. The tool should integrate with platforms like Instagram, Twitter, and Facebook to retrieve real-time data and display it in a clean, user-friendly interface.

Features:

- Connect to Social Media APIs (Instagram, Twitter, Facebook)
- Fetch and display real-time metrics (Followers, Engagement, Reach)
- Historical data analytics (Graphical Trends)
- User Custom Dashboards
- Email Reports for Weekly Analytics

Tech Stack:

- Backend: Python with Flask
- Frontend: Vue.js
- Database: MySQL
- Social Media Integration: REST APIs for Instagram, Twitter, Facebook

Requirements:

- The tool should have a responsive interface for both desktop and mobile.
- Data should be stored in an encrypted form and comply with data privacy laws.
- User accounts should be able to schedule reports to be sent via email.
- Should allow users to compare multiple social media accounts.

Timeline:

- 4 months for development, 2 months for testing.
