

RFP: Task Management System

Project Overview:

We need a task management system to help teams track and manage their work in an organized and efficient manner. The system should allow users to create, assign, and update tasks, set deadlines, and track progress. It should also have notification features to alert users about upcoming deadlines.

Features:

- Task Creation (Title, Description, Priority, Deadline)
- Task Assignment (Assign to Team Members)
- Task Progress Tracking (To Do, In Progress, Done)
- Task Notifications (Email Alerts for Deadlines)
- Team Collaboration (Comments, Attachments)
- User Role Management (Admin, Regular User)

Tech Stack:

- Backend: Ruby on Rails
- Database: PostgreSQL
- Frontend: Bootstrap + jQuery
- Notifications: Email via SendGrid

Requirements:

- User-friendly UI with intuitive navigation.
- Real-time task updates and status changes.
- Scalable to handle multiple teams and projects.

- Should support custom tags and labels for tasks.

Timeline:

- 2 months for development, 1 month for user feedback and testing.
