

RFP: User Management System

Project Overview:

We are looking for a comprehensive user management system for our internal tools. The system should provide functionalities for user registration, login, and profile management. It should also allow for user role management, including assigning admin and user roles.

Features:

- User Registration (Username, Password, Email)
- User Login
- Profile Management (View, Update)
- User Roles (Admin, Regular User)
- Password Recovery
- Two-Factor Authentication (Optional)

Tech Stack:

- Backend: Python with Django
- Database: PostgreSQL
- Frontend: ReactJS
- Authentication: JWT (JSON Web Tokens)

Requirements:

- The system must be scalable and easy to integrate with other internal tools.
- User data must be securely stored, and sensitive information like passwords must be encrypted.
- The system should be deployed on AWS using Docker containers.

Timeline:

- 3 months for development and deployment.
